Vitamins

The overall vitamin market is weak, and many products of the Vitamin B group have dropped slightly. Vit B1 continues to bottom, customers are actively purchasing, and some customers have signed orders for the Q4. Niacin/nicotinamide fell slightly, and the transaction is general. Vit B6 factories have a strong willingness to increase prices, the market is still dominated by consumption of inventory. The raw materials of Choline Chloride rose, quotations rebounded slightly, and attention increased.

Amino Acids

Due to the rise in corn prices and the continuous increase in the price of soybean meal, domestic factories of small varieties of amino acid tryptophan and valine, isoleucine have signed more orders, and the market supply is relatively tight. Some factories have stopped reporting and signing, wait-and see. The buying and selling atmosphere of the overall lysine market has improved, inquiries increased, and the factories are more motivated to stand up for prices. The threonine market is stable, and there are not many orders signed downstream, pay attention to the progress of the signing of the factory in the later stage.

API

The APIs market maintained a weak and stable operation, and the transactions were stable. The overall purchase was based on demand. Although the prices of many varieties were already at a low level, the market lacked upward momentum, and all channels were cautious in purchasing goods. For florfenicol, the price competition is still going on, and the price continues to go down. The varieties of doxycycline, Tylosin, and Tilmicosin remained stable last week.

Food Additives

Recently, the price of sodium benzoate has been raised. The transaction price in the foreign market is around 1.5 USD/KG. The possibility of price increases will not be ruled out in the future, and continue to pay attention.
