## Vitamins to VEGA!

28th. Nov. 2023

### 01

#### Vitamin

In recent years, affected by factors such as macroeconomics and poor performance of downstream breeding enterprises, the feed-grade VD3 market has been sluggish, coupled with overcapacity, prices have fluctuated and declined. It has now fallen to historical lows, and some companies have suffered losses. Due to the small number of food-grade VD3 manufacturers, the market price fluctuates little.

### 02

#### Amino Acid

The factory quotation of 98% lysine has been slightly lowered, with the ex-factory price around USD1.33/KG. The price of 70% lysine is relatively weak.

### 03

#### API

The recent market popularity of Tylosin has been average, but there are orders for stocking up and purchasing, and the market inventory is slowly decreasing, so we need to pay close attention to it.

### 04

#### Food Additive

Recently, Baolingbao announced that the company's "Isomalto-oligosaccharide (IMO)" has successfully passed the Brazilian National Health Supervision Agency (ANVISA) registration and approval (No. 1120749/23-5) and is allowed to be added to food.
