Vega, China Vitamins Manufacturer

VITAMINS TO VEGA

29th, Nov, 2023

01 Vitamin

Since November 14th, major domestic VC manufacturers have announced that they will stop quotations and will continue to do so. After the suspension of trading, transactions in the domestic market became active, and export inquiries increased slightly. However, the supply of goods in the market was sufficient, and inventory was mainly consumed.

02 Amino acid

For threonine, the recent quotations from manufacturers are weak and stable, there are not many market inquiries, purchases and sales are light, and users are not very willing to sign orders. The market is expected to be stable in the short term.

03 API

For colistin sulfate, the market's low-priced supply has been basically exhausted, and customers' price acceptance is also relatively good; factory prices have remained strong recently and are expected to run smoothly in the future.

04 Food additives

Affected by market demand, the price of potassium sorbate has stabilized, and subsequent price drops are less likely. We will continue to pay attention to the market conditions.
