VITAMIN

01

According to market news, starting from February 26, NHU stopped reporting feed-grade VA and feed-grade VE; previously on February 26, ZMC had stopped quoting VA and VE.

AMINO ACID

02

Tryptophan: Manufacturers' quotations are stable, and actual inquiries from the trade market are average, with quotations around USD 7/KG. At present, factory production remains stable, mainly delivering early orders, with few inquiries from end users and few spot goods in some trades. Pay attention to the signing of orders and upstream shipments. It is expected that the price of tryptophan will be mainly stable.

API

03

ZMC announced that its holding subsidiary Zhejiang Novus Pharmaceuticals Co., Ltd. underwent a CGMP on-site inspection by the U.S. FDA from October 30 to November 8, 2024, covering vancomycin hydrochloride for injection. Recently, the company received an on-site inspection report and letter issued by the FDA, confirming that Zhejiang Novus Pharmaceuticals Co., Ltd.'s production quality management system complies with the CGMP requirements of the U.S. FDA and has successfully passed this routine supervision and inspection. This FDA inspection has enhanced the international competitiveness of ZMC's preparations and laid the foundation for other products to enter the international market.

FOOD ADDITIVE

04

Recently, affected by market demand, the transaction price of food additive anhydrous saccharin sodium has stabilized at around US\$4.8-5.2/KG in the foreign market. In the short term, the price of anhydrous saccharin sodium will stabilize.
