## VITAMIN

01

Starting this week, inquiries for Vitamin E 50% feed grade have increased significantly in both domestic and overseas markets, pushing transaction prices gradually higher. Current Chinese market transaction price is about USD6.3-6.5/KG, with limited willingness to sell at prices lower than this price. Supported by rising factory prices and exchange-rate adjustments, FOB offers have increased to USD 6.2-6.5/kg, and low-priced materials are nearly unavailable. Some producers are offering USD 6.5-7 or have suspended quotations.

## AMINO ACID

02

Market activity for Tryptophan remains subdued, with prices trending slightly downward. Trading quotations are at USD 3.79–4.05/KG, and factory order-taking is limited. Production remains stable and supply is ample, while downstream demand is weak. Prices are expected to edge down slightly in the short term, with order activity remaining a key focus.

## API

03

- For Tylosin Tartrate and Tilmicosin Phosphate, some leading manufacturers have attempted to maintain prices; however, weak demand and year-end inventory clearance by traders have led to negotiated transactions and slight downward price adjustments. Current market prices are approximately USD 36.7/KG for Tylosin Tartrate and USD 40.5/KG for Tilmicosin Phosphate.
- On December 9, Newland Pharmaceutical Co., Ltd. (Stock Code: 301277) announced that its Ferrous Fumarate API received approval from China's National Medical Products Administration (NMPA) on December 8, 2025. The product is packaged in 25KG drums and has a validity period of 18 months.

## FOOD ADDITIVE

04

Recently, updates in the National Health Commission's administrative licensing system show that "Krill Oil" and "Luohan Ginseng" have been re-added to the list of newly terminated novel food ingredient reviews. The total number of new food raw materials that have been terminated from the review process has reached 95.
