VITAMIN

01

Choline chloride prices have started to recover as ethylene oxide costs continue to rise. Over the weekend, ethylene oxide increased by another USD 40/MT, pushing Choline Chloride 60% Powder to around USD 700/MT, with other specifications also moving higher. Deliveries from some producers remain tight, and the market is expected to stay firm in the near term if raw material costs continue to rise.

AMINO ACID

02

Following producers' quotation suspensions, maintenance shutdowns, and traders' reluctance to sell, solid Methionine transactions have stabilized at USD 3.90-4.03/KG. Downstream buyers remain cautious, and the market is expected to fluctuate within a narrow range in the short term.

API

03

Beijing Wellso Pharmaceutical Co., Ltd. has received acceptance from China's NMPA for the marketing application of Procaine Hydrochloride API. Meanwhile, Florfenicol prices remain near historical lows at USD 21.13–21.80/KG. With several major producers planning maintenance shutdowns and suspending quotations, price-support sentiment has strengthened, and the market is expected to trend firmer in the near term.

FOOD ADDITIVE

04

China's General Rules for Postbiotic Foods (T/CHC1018-2026) has officially come into effect, establishing standardized requirements covering strain identification, inactivation processes, ingredient labeling, and safety evaluation. The new standard provides a clearer regulatory framework and is expected to promote the healthy development of the postbiotic ingredient market
