VITAMIN

01

Last week, the vitamin market experienced a slight fluctuation: VE manufacturers continued to suspend quotation, and a major manufacturer, in response to the domestic market, signed orders at USD10.56/KG with limited quantity and customers for a short period of time, but then immediately suspension of offering and signing. As a result, the market price continued to rise; VA manufacturers still suspended reporting, and the market price rebounded, with better transaction conditions and sellers being reluctant to sell in the channels; trimethylamine, the raw material of choline, saw a slight increase; the choline market remained stable overall; and varieties such as panthothenic acid calcium, B2, B6, and biotin continued to decline.

AMINO ACID

02

Some small-volume amino acids showed signs of recovery. Valine and Arginine prices increased slightly, while producers of Isoleucine showed stronger price-support sentiment. Valine quotations from major producers rose, with market transactions at USD 1.40–1.45/KG. Isoleucine quotations reached USD 3.04–3.17/KG, with prices expected to strengthen further in the near term.

API

03

The API market remained generally stable with a strengthening trend in some products. Florfenicol prices continued to rise amid suspended quotations, while Colistin Sulfate remained firm due to tight supply. Amoxicillin weakened amid relatively ample spot availability, while Enrofloxacin and Ciprofloxacin fluctuated at low levels. Doxycycline, Tylosin Tartrate, and Tilmicosin Phosphate remained relatively stable.

FOOD ADDITIVE

04

Sucralose remained stable at USD 12.28–12.55/KG, while Creatine Monohydrate held at USD 3.04–3.30/KG, with deliveries scheduled through September. L-Carnitine remained stable at USD 23.77–25.00/KG. Meanwhile, Taurine supply has tightened as several producers plan maintenance shutdowns. With spot availability extremely limited, prices have risen rapidly to USD 3.83–4.10/KG and are expected to remain firm in the near term.
