VITAMIN 01

The Vitamin market fluctuated slightly recently. Following quotation increases by Vitamin C producers, transaction prices have moved higher and the market remains firm. Rising prices of Choline raw materials, Trimethylamine and Ethylene Oxide, have prompted producers to raise quotations significantly, while buyers remain cautious. Vitamin D3 producers have also implemented substantial price increases, attracting increased market attention.

AMINO ACID 02

- The minor amino acid market remained generally stable last week. Tryptophan was quoted at around USD 3.70–3.75/KG, with subdued downstream replenishment. Isoleucine stabilized at around USD 3.15/KG, while Valine remained well supplied at USD 1.40–1.45/KG, with actual transactions negotiable and prices expected to remain stable in the near term. Methionine remained relatively firm at USD 3.00–3.22/KG, supported by suspended quotations and new orders from some producers, stronger price-support sentiment, and increased export orders.
- In addition, Meihua Group has raised prices for I+G by 10% due to continued increases in raw material and logistics costs, with priority given to long-term stable customers.

API 03

The veterinary API market continued to fluctuate with divergent trends. Florfenicol producers raised quotations again amid upstream raw material cost pressures, pushing transaction prices higher. Neomycin Sulfate also strengthened, supported by recovering demand and higher costs after remaining under pressure at low levels. Amoxicillin and Colistin Sulfate remained firm, while other major products were broadly stable. Supply from producers and downstream demand remain key factors to monitor.

FOOD ADDITIVE 04

In sweeteners, Sucralose transaction prices stabilized at around USD 12.34–12.60/KG amid raw material market changes and are expected to remain stable in the short term. For nutritional ingredients, some Creatine Monohydrate producers have suspended quotations or raised prices due to higher raw material costs, with transactions around USD 3.00–3.35/KG and delivery schedules extending into late September. L-Carnitine prices remained stable at around USD 24.00–25.48/KG, with prices expected to remain generally stable.
