VITAMIN 01

The Folic Acid market remained weak. Current reference offers for recently produced products from major brands stood at around USD 27.50–27.90/kg, while some older inventory was available at approximately USD 26.82/kg. Despite rising raw material costs, sluggish market demand has kept overall prices relatively stable. Most customers continue to purchase on an as-needed basis.

AMINO ACID 02

Valine market activity remained subdued, with producers maintaining stable operations amid oversupply and weak downstream demand. End users continued to replenish stocks mainly to meet immediate needs, while trading inquiries remained limited. Prices declined to USD 1.31–1.34/kg, with actual transaction prices generally lower. With no significant improvement in demand expected in the short term, valine prices are likely to remain under pressure at low level.

API 03

- Swiss CDMO Lonza signed a definitive agreement to acquire five of Merck KGaA's U.S. CDMO facilities and related businesses, covering bioconjugates, highly potent payloads and linkers, viral vectors, and advanced drug delivery technologies. The transaction has an enterprise value of several hundred million Swiss francs and is expected to close in mid-2027, subject to regulatory approvals and customary conditions.
- The Enrofloxacin market remained stable, with large-volume transactions (1 MT or above) at approximately USD 20.00–21.45/kg. Prices are approaching bottom levels, while traditional year-end demand may provide support. Market attention will focus on producers' pricing strategies around the upcoming API exhibition.

FOOD ADDITIVE 04

The world's first production line for plant-derived methylselenium was commissioned in Ziyang County, Shaanxi, China. Based on a specially developed rapeseed variety and molecular breeding technology, the facility uses controlled soilless cultivation to produce selenomethylselenocysteine. With a total investment of approximately USD 17.99 million, it has an annual capacity of 3,000 kg of plant-derived methylselenium rapeseed shoot powder, with organic selenium accounting for over 93% of total selenium content. The ingredient is attracting interest for its potential applications in antioxidant and immune-support formulations.
